Toronto, Ontario

I build products when there is a real customer need but no clear path to delivery.

Fintech co-founder with hands-on experience in payment gateways, platform APIs and organizational crypto custody. Combines roadmap ownership with technical delivery. Open to the GTA, remote work, or relocation anywhere in Canada.

>USD $80M	CAD $3M	~20,000	20
Payment-processing volume at Pontemesto March 2026 to October 5, 2026	**Raised for Keywa** Co-founder, 2020 to 2024	**Clients on the retail self-custody wallet** Within weeks of launch	**Specialists recruited and led at Keywa** Company acquired December 2024

Ventures

Pontemesto

Co-founder · 2026 to present · pontemesto.app

High-risk merchants were ready to work with us. The company had no way to onboard them or process their payments.

1. **Find the gap.** Merchant demand existed. The onboarding and processing path did not.
2. **Set the roadmap.** Researched the options, then owned the product roadmap and the onboarding requirements.
3. **Design the gateway.** Designed the payment gateway and the APIs for exchanges and liquidity providers.
4. **Direct the build.** Translated merchant and partner requirements into implementation direction for developers.
5. **Close the partner.** Evaluated and selected processing partners, then structured the partnership and its contracts.

More than USD $80 million in payment-processing volume from March 2026 through October 5, 2026.

Keywa (formerly Tardigrade)

Co-founder · 2020 to 2024 · Acquired December 2024

Organizations needed shared control of their crypto assets. One person holding one key was the risk nobody could sign off.

1. **Find the need.** Interviewed specialists and found that organizations needed shared crypto-asset control.
2. **Build the team.** Recruited and led 20 people. Raised CAD $3 million.
3. **Ship custody.** Delivered organizational self-custody with multiple signing authorities.
4. **Stay in the code.** Directed exchange and liquidity-provider API design and built components alongside developers.
5. **Adapt for retail.** Turned the technology into a retail wallet. About 20,000 clients arrived within weeks.
6. **Exit.** Keywa was acquired in December 2024. Ali sold his ownership.

Ali co-authored a whitepaper that proposes two-layer threshold signing: departmental approvals, distributed key management, and signer replacement that leaves the wallet address unchanged.

CMOR Group Corporation

Chief Executive Officer · 2018 to 2023

Markets move on news faster than a person can read it. CMOR built trading software that could read first.

1. **Found and fund.** Founded and self-funded the company.
2. **Build the applications.** Developed algorithmic trading applications for foreign-exchange and equity markets.
3. **Read the news.** Developed an AI-powered news-trading system that analyzed market sentiment.
4. **Automate the response.** The system automated responses to global news. Ali led product development and deployment.

Algorithmic trading applications for foreign-exchange and equity markets, founded and self-funded.

Other ventures

MyInvestino.ir Founder, 2020 to 2025
A micro-investing platform with financial-institution integrations.

Chante.app Founder, 2020 to 2025
A cryptocurrency wallet with localized onboarding and support.

Chainblock.app Founder, 2018 to 2020
A blockchain platform for digital-asset transactions, smart contracts and decentralized applications.

Open-source projects

Manyworld github.com/alinojoumi8/manyworld
An open-source platform for exploring how agents acting as households, businesses and banks respond to changing conditions. It validates every transaction, keeps double-entry accounts, and can replay an experiment exactly.

TrialLens github.com/alinojoumi8/triallens
An open-source workspace for evidence review and courtroom rehearsal. Each rehearsal links to source evidence through a decision trace, with evidence-use controls and saved audit records.

CrowdLens github.com/alinojoumi8/crowdlens
An audience-simulation product on an open-source foundation. It explores possible reactions to product launches, advertising and company news, from document-based scenarios, with source-linked reports and saved human reviews.

Core skills

Product strategy & roadmaps · Cross-team delivery · API & gateway design · Merchant onboarding · Digital-asset custody · Exchange & liquidity integrations · Processing partnerships & contracts · Team hiring & leadership

Education and languages

Bachelor of Computer Science, University of Mashhad, Iran (1998). Financial markets and algorithmic trading, New York Institute of Finance (Coursework). English (fluent), Farsi (native).
